INTENDED USE
This prepared medium is for the growth of microorganisms.

SUMMARY AND EXPLANATION
Prepared plated media are for the isolation and growth of microorganisms from specimens by streak plate procedures.1

PRINCIPLES OF THE PROCEDURE
A wide variety of media have been formulated to satisfy the various nutritional requirements of microorganisms. The functions of many media ingredients have been elucidated.2

REAGENTS
BBL™ Neomycin Blood Agar, Modified
Approximate Formula* Per Liter Purified Water
Pancreatic Digest of Casein .................................................. 14.5 g
Papain Digest of Soybean Meal ........................................... 5.0 g
Sodium Chloride .................................................................. 5.0 g
Agar .................................................................................. 14.0 g
Growth Factors ................................................................... 1.5 g
Neomycin ........................................................................... 60.0 mg
Sheep Blood, defibrinated .................................................. 5%

*Adjusted and/or supplemented as required to meet performance criteria.

Warnings and Precautions:
For in vitro Diagnostic Use
If excessive moisture is observed, invert the bottom over an off-set lid and allow to air dry in order to prevent formation of a seal between the top and bottom of the plate during incubation.

Storage Instructions: On receipt, store plates in the dark at 2 – 8 °C. Avoid freezing and overheating. Do not open until ready to use. Allow the medium to warm to room temperature before inoculation. Prepared plates may be inoculated up to their expiration date and incubated for recommended incubation times.

Product Deterioration: Do not use plates if they show evidence of microbial contamination, discoloration, drying, cracking or other signs of deterioration.

SPECIMEN COLLECTION AND HANDLING
Refer to appropriate references for details of specimen collection and handling procedures.1,3

Observe established precautions against microbiological hazards throughout all procedures. All specimens should be handled according to CDC-NIH recommendations for any potentially infectious human serum, blood or other body fluids. Prior to discarding, sterilize specimen containers and other contaminated materials by autoclaving.

PROCEDURE
Material Provided: Neomycin Blood Agar, Modified.

Materials Required But Not Provided: Ancillary culture media, reagents, quality control organisms and laboratory equipment as required.

Test Procedure: Observe aseptic techniques. Inoculate the medium as soon as possible after the specimen arrives at the laboratory. Incubate the plates in an inverted position (agar-side up) under conditions of temperature, humidity, time and atmosphere appropriate for the organisms being cultured.

User Quality Control:
1. Examine plates for signs of deterioration.
2. Check performance by inoculating a representative sample of plates with pure cultures of stable control organisms that give known, desired reactions. The following test strains are recommended:

<table>
<thead>
<tr>
<th>TEST STRAIN</th>
<th>EXPECTED RESULTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Staphylococcus pyogenes ATCC™ 19615</td>
<td>Fair to heavy growth with zones of beta hemolysis</td>
</tr>
<tr>
<td>Streptococcus agalactiae ATCC 12386</td>
<td>Fair to heavy growth with zones of beta hemolysis</td>
</tr>
<tr>
<td>Staphylococcus aureus ATCC 25923</td>
<td>Partial Inhibition (no growth to fair growth). May be beta-hemolytic</td>
</tr>
<tr>
<td>Escherichia coli ATCC 11775</td>
<td>Partial Inhibition (no growth to trace growth)</td>
</tr>
</tbody>
</table>

RESULTS
Isolated colonies should give results consistent with those of the quality control strains.

LIMITATIONS OF THE PROCEDURE
Consult appropriate references for detailed information and recommended procedures for the identification of isolates.1,4

AVAILABILITY
Cat. No. Description
299961 BBL™ Neomycin Blood Agar, Modified, Ctn. of 100 plates
